

Location Numbering Systems

Two processes, explained below, support the administration of location identifiers that adhere to the federal standards. State-issued location identifiers are referred to as LIDs, and the location numbers states' obtain through the federal allocator are referred to as PINs. **Both numbers are nationally unique and recognized.**

Premises Identification Number (PIN)

A national premises identification number (PIN) is a unique number, permanently assigned to a physical address where agricultural animals are located. All owner and premises information collected is stored and maintained in a federal database. Texas utilizes the USDA-APHIS provided Standardized Premises Identification System to obtain a PIN from the federal allocator. A PIN consists of seven alphanumeric characters, beginning with two leading zeros. **To obtain a PIN, contact the TAHC Animal Disease**

Traceability (ADT) department at 1-800-550-8242 ext. 733

Location Identification Number (LID)

Texas has a state system and process for issuing a location identification number (LID). A LID is assigned to an owner's contact and operation information, which are stored in a state administered database. The information collected is not shared with the federal system, only the LID number itself is reported to the federal system as a valid number. All LIDs start with the state postal abbreviation (TX) followed by six random alphanumeric characters, which makes the LIDs nationally unique. **To obtain a LID, contact your local TAHC region office.**

Official ID

A complete list of acceptable identification devices/methods may be found at www.tahc.texas.gov, but the most commonly used devices include USDA NUES metal tags and US origin AIN 840 series Radio Frequency Identification (RFID) tags. Producers are encouraged to contact their veterinarian or TAHC to determine which method of tagging will be best for their operation.

National Uniform Eartagging System (NUES) tags

State animal health officials, approved tagging sites, county extension agents, and accredited veterinarians may provide NUES identification eartags to producers who wish to use them for official identification without administering the eartags through a specific disease program. NUES eartags are designed for one-time use (tamper evident) and are imprinted with the 9 character NUES number and the Official US Eartag Shield. **NUES tags are available at no cost, while supplies last. The tags and/or pliers may be obtained by contacting your local TAHC region office or an official tag distribution partner.**

Animal Identification Number (AIN) Devices

AIN device manufacturers and managers may distribute AIN devices with the 840 prefix to producers. All recipients of AIN devices must first obtain and provide a PIN or LID number to the device supplier. Producers electing to use AIN devices may purchase them from an approved supplier. The complete listing of approved AIN devices and the AIN tag manufacturer's information can be found at: http://www.aphis.usda.gov/traceability/downloads/ADT_device_ain.pdf **840 RFID tags and application pliers are available at no cost, while supplies last. The tags and/or pliers may be obtained by contacting the TAHC ADT department or your local TAHC region office.**

For additional information, visit www.tahc.texas.gov, contact the TAHC ADT department at 1-800-550-8242 ext. 733, or your local TAHC region office.
